## **Problem Solution Approach – Q1**

First to be able to create a linked list i have created a private inner class inside LinkedList class. According to this homework a node should have kept an array which has constant capacity so i have created a new class which manipulate this array with some basic methods. When the array of a node has been filled I have created a new node for new datas. if the user tries to insert an element in a node which is full then the new node will be created between this node and next node. I have kept the tail of list due to make add easier from end of the list. The LinkedList extends from AbstractList and implements List interface so I had had to implement some methods which comes from super class and the interface. After overriding some important methods there is more methods that user can use through super class. I have create a new inner iterator class also which implements ListIterator interface.

This iterator class has kept two reference and three index fields. One reference keeps a node to determine where this iterator is. The other reference keeps where the last returned item from. One of the indexes is keeps the total index and the other two index keeps the index of element just for one node.

## **Problem Solution Approach – Q2**

I have kept the datas as List. This list keeps the all characters of SimpleTextEditor. To determine whether List is LinkedList or ArrayList I have used two different constructors. One of them has taken name of the file as string and has taken boolean expression to determine the list is LinkedList. The other has taken just the name of the file as string and list is determined as ArrayList.

## Theoretical Analysis - Q2

Method	ArrayList	LinkedList
read()	Read method uses add(char) method N times. The add(char) method works with O(N) complexity because of resizing. Totally read method works with O(N <sup>2</sup> ) complexity.	The add(char) method works with O(1) complexity so read method works with O(N) complexity.
readWithIter()	The ListIterator.add(char) works with O(N) complexity. So this readWithIter() method works with O(N <sup>2</sup> ) complexity.	The ListIterator.add(char) works with O(1) complexity, so this readWithIter() method works with O(N) complexity.
add(int,String)	The add(int,String) method uses add(int,char) method which has O(N) complexity from ArrayList. So Total complexity is O(NM). M is because of length of string and N is because of index.	The add(int,String) method uses add(int,char) method which has O(N) complexity from LinkedList. So Total complexity is O(NM). M is because of length of string and N is because of index.
addWithIter(int,String)	listIterator(int) Has O(1) complexity .  ListIterator.add(char) has O(N) complexity. Because of resizing may be occur.	listIterator(int) Has O(N) complexity .  ListIterator.add(char) has O(1)  And there is a loop

	<p>And there is a loop which has <math>O(N^2)</math> complexity.</p> <p>totally the complexity is <math>O(N^2)</math></p>	<p>which has <math>O(N)</math> complexity.</p> <p>totally the complexity is <math>O(N)</math></p>
find(String)	<p>Complexity is <math>O(NM)</math>.</p> <p>N is size of the all text.</p> <p>M is the length of the String which is searched.</p>	<p>Complexity is <math>O(NM)</math>.</p> <p>N is size of the all text.</p> <p>M is the length of the String which is searched.</p>
findWithIter(String)	<p>The complexity of listIterator() is <math>O(1)</math></p> <p>Total complexity is <math>O(NM)</math>.</p> <p>N is size of the all text.</p> <p>M is the length of the String which is searched.</p>	<p>The complexity of listIterator() is <math>O(1)</math></p> <p>Total complexity is <math>O(NM)</math>.</p> <p>N is size of the all text.</p> <p>M is the length of the String which is searched.</p>
replace(char,char)	<p>Complexity of get(int) is <math>O(1)</math></p> <p>Complexity of set(int,char) is <math>O(1)</math></p> <p>Total complexity is <math>O(N)</math> because of for loop.</p>	<p>Complexity of get(int) is <math>O(N)</math></p> <p>Complexity of set(int,char) is <math>O(N)</math></p> <p>Total complexity is <math>O(N^2)</math> because of for loop.</p>
replaceWithIter(char,char)	$O(N)$	$O(N)$

## Experimental Performance - Q2

By using ArrayList

Without iterator:	add	read	find	replace
40 character	: 57ms	2197700ns	180000ns	1870400ns
200 character	: 215ms	2398500ns	568100ns	1437000ns
600 character	: 688ms	2408400ns	881400ns	2948100ns

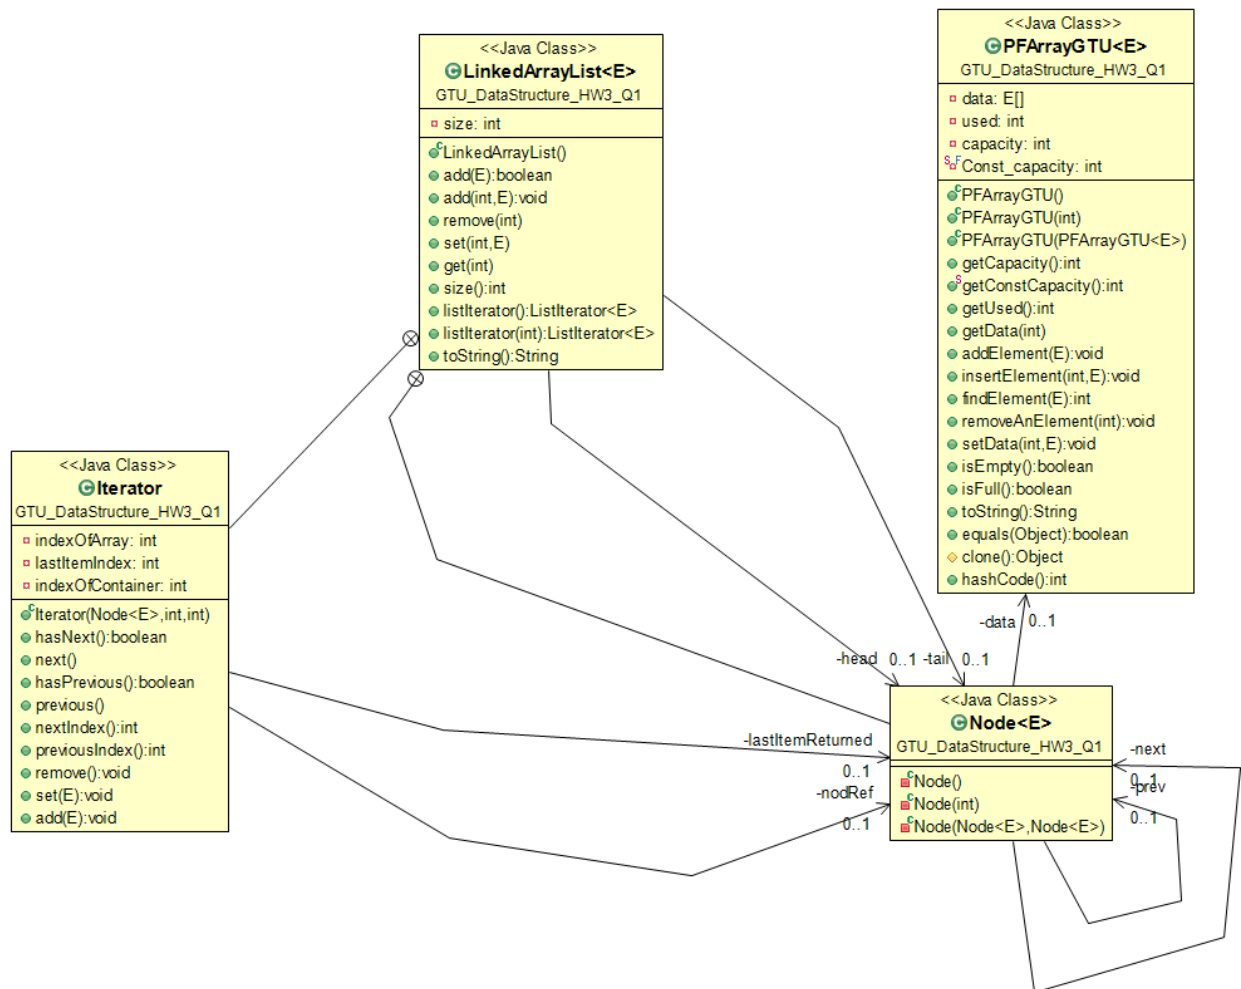

With iterator	: add	read	find	replace
40 character	: 42ms	1497500ns	172700ns	1171700ns
200 character	: 190ms	1309700ns	1526900ns	1121000ns
600 character	: 509ms	1590400ns	1954700ns	1473000ns

By using LinkedList

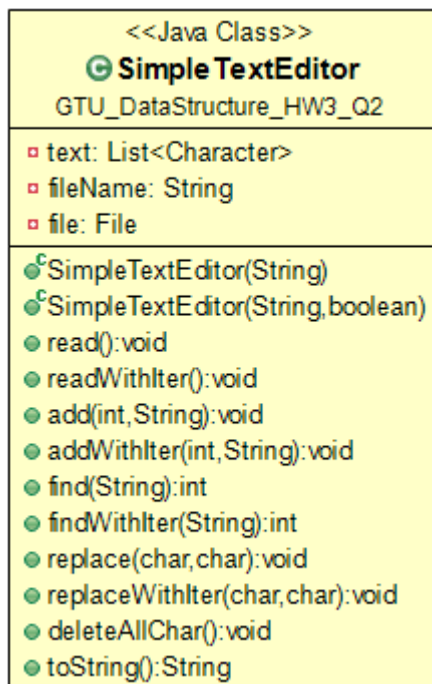

Without iterator:	add	read	find	replace
40 character	: 42ms	1174200ns	338600ns	1527000ns
200 character	: 200ms	2063500ns	1526400ns	2071300ns
600 character	: 607ms	1519400ns	3018900ns	1882500ns

With iterator	: add	read	find	replace
40 character	: 32ms	1099200ns	287900ns	979300ns
200 character	: 164ms	1409800ns	1674400ns	1624000ns
600 character	: 637ms	1805100ns	1946300ns	1647500ns

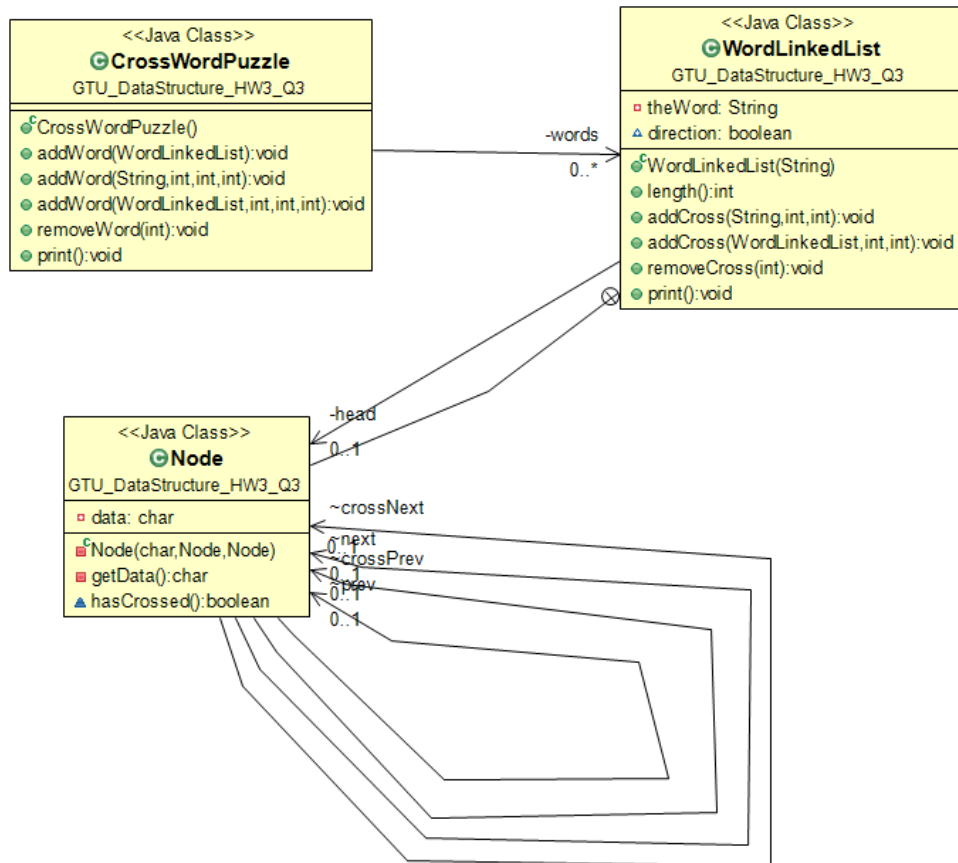

# Class Diagram-Q1

## Class Diagram-Q2

## Class Diagram-Q3

## Test Cases Q1

Test ID	Scenerio	Test Data	Expected Result	Actual Result	Pass /Fail
1	Create two different LinkedList,one of them keeps charackers and the others keeps Strings.in first initialization ,try to print them.	names, alphabet	Prints empty sets	As expected	Pass
2	Add a lot of elements to LinkedList (names, alphabet).print and see the elements which is added. Add(element);	elemenet = All letters in english for alphabeth object.  Element = some arbitrary strings for names object.	Prints all elements which is added.	As expected	Pass
3	Add a few more element to both object names and alphabet. Then print and see whether they are added in correct index.  Add(index,element)	Index = All indexes was arbitrary and less than size.	Prints the all elements in correct index.	As expected	Pass
4	Remove some element from both objects names and alphabet.then print to see whether they are removed correctly.  Remove(index)	Index = All indexes was arbitrary and less than size.	Prints the all elements in correct index.	As expected	Pass
5	All characters in the alphabet object are setted to 'u'  Set(index,character)	Index = All indexes respectively. Character='u'	All elements in alphabet turns to 'u'	As expected	Pass
6	Print all elements of alphabet by using get method.  Get(index)	Index = All indexes respectively.	Prints the all ellements in alphabet object.	As expected	Pass
7	Take an iterator from alphabet object then go up to end by using next and hasNext methodes.	Iterator of alphabet object.	All elements in the alphabet object are removed.when we try to print the alphabet	As expected	Pass

	after the all next methods call the remove method of the iterator.		object we will see a empty set.		
8	Take an iterator from names object and print the all data inside the names object by using hasNext and next methodes.	Iterator of names object.	All elements are gonna be printed in names object.	As expected	Pass
9	Print the all data of the names object by using hasPrevious and previous methodes.	Iterator of name object.	All elements are gonna be printed in reverse order.	As expected	Pass
10	Go up to end with iterator of names object by using next and hasNext. After the all call of the next method call the set method and set the all data to "setted".	Iterator of name object.	All elements of name object turns to "setted".	As expected	Pass
11	Take an iterator from alphabet object from beginning. Fill this object with letters by using iterator and add method of iterator.	Iterator of alphabet object.	When we print this alphabet object we will see all letters respectively.	As expected	Pass
12	Take an new iterator from alphabet by using index.and print all data in reverse order.	Inedx = size of the alphabet object.	All datas in alphabet object will be printed in reverse order.	As expected	Pass
13	Take a new iterator form names with index. Go back up to first element by using previous and hasPrevious methodes.after all previous method call the remove method.	Index = size of the names object.	All elements of the name object will be removed and when we try to print names object we will see a empty set.	As expected	Pass
14	Try to remove with empty LinkedList	Index = 1;	ArrayIndexOutOfBoundsException	As expected	pass
15	Try to remove an element with index.	Index = greater than size.	ArrayIndexOutOfBoundsException	As expected	Pass

16	Try to call remove method of iterator without call the next or previous method.	Iterator of the names object.	IllegalStateException	As expected	Pass
17	Try to call set method of the iterator without calling the next or previous method.	Iterator of the names object.	IllegalStateException	As expected	Pass
18	Add(index,element)	Index = -1	ArrayIndexOutOfBoundsException	As expected	Pass

## Test Cases Q2

Test ID	Scenerio	Test Data	Expected Result	Actual Result	Pass/Fail
1	Create a new simpleTextEditor and fill this text editor with random characters by using add(index,element) method.	Index = from zero to 40 or 200 or 600.	File is created and all data added to file.	As expected	Pass
2	Read the file and print it on terminal	editor	All data which is in the file will be printed on terminal.	As expected	Pass
3	Test the find method Find(toSearch)	ToSearch = the last word in the file.	First index of the word will be printed.	As expected	Pass
4	Turn the all space characters of the file to '.' by using replace method.	Letter = ' ' NewLetter = '.'	All spaces turnes to '.'	As expected	pass

## Running Command and Results Q1

```
Process finished with exit code 0
```

## Running Command and Results Q2
